RI Witness™

The only option for 24/7 security

CooperSurgical®
Fertility Solutions
The ultimate safeguard

How does it work?
Self-adhesive Radio Frequency ID (RFID) tags on all lab plasticware are detected by readers in every work area. Thanks to this, a complete picture of what happens in the lab is possible.

Is it safe?
Radio waves have been proven safe for in vitro procedures and embryos.* RI Witness has been used clinically for more than 10 years.

Certificate of Analysis (Ectors, FJ, August 2005, GIGA Université de Liège, Belgium)
Certificate of Analysis (Pearce, J, May 2007, Embryotech, Wilmington USA)
Barcodes need to read each dish, lined up or individually side by side in the line of sight for the scanner to verify that they are compatible. Samples will need to be taken out of the work area to be checked, which can be disruptive.

RI Witness reads all dishes simultaneously and automatically, allowing the operator to work uninterrupted.
Barcode security relies on the operator remembering to do checks. In fact, a procedure can be performed without the activity being logged in the system, no alert or action will be instigated. The IVF cycle’s security could be compromised.

RI Witness monitors the work area under the microscope constantly. Giving 24/7 protection, a check cannot be unintentionally overlooked.
Mismatch

Using a manual or barcode system two unrelated samples can be in the same work area, and may even be manipulated, without the operator being aware that the samples are incompatible.

Perceptual blindness, tiredness, involuntary automaticity*, ambiguous accountability, conscious automaticity and interrupted workflow can all lead to potential mistakes.

*Toft & Mascie-Taylor, 2005; Toft & Gooderman, 2009

RI Witness will alert the operator immediately, before samples are manipulated, if incompatible samples are in the same work area. This allows corrective action to be taken while the security of the sample is intact.

Workflow

Using RI Witness, samples experience minimal time outside the incubator due to smoother operations and no extra steps.

Continuous 24/7 monitoring

Workflow

Human and barcode witnessing only gives a snapshot of activity at certain times in the cycle. Therefore, only specific moments in the IVF cycle are logged. Workflow can be interrupted to make checks, taking up valuable time.
RI Witness’s electronic verification reinforces adherence to Standard Operating Procedures and validation of chain of custody for all samples in the IVF process. It provides peace of mind for the practice and the patient.
